AWARD

## Praise for **Adventure Beneath the Sea**

"All in all, this is a rather nifty look at scientists busily at work on interesting projects, all the while living like human hermit crabs in a shell-type lab." —*School Library Journal*

"Most children know what an astronaut is, but an aquanaut? Not so common. Focusing on a one-week expedition in the underwater science station Aquarius, Mallory and marine photographer Skerry literally immerse themselves in this adventure. . . . What do aquanauts eat? Can you make telephone calls and send e-mails? And most importantly—is it possible for a toilet to explode from too much pressure? (Answer: yes.)" —*Kirkus Reviews*

"Amazing photos by *National Geographic* photographer Brian Skerry combined with lively, well-written text . . . make this an adventure not to be missed!" —*Children's Literature*

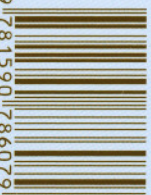

"Young people intrigued by marine biology will want to join Mallory and Skerry on this journey beneath the sea." —*Booklist*

"Mallory offers an engrossing, and sometimes humorous, account of his week spent in Aquarius, joining a team that's investigating sea life in the Conch Reef."

—*Bulletin of the Center for Children's Books*
