Chapter Five: Blending Helium Mixes	43
Conclusion	55
Appendix	57

GAS BLENDER

In the DSAT Gas Blender course, you will learn to safely blend enriched air and trimix. Through a balance of independent study, classroom discussion and training exercises, you will acquire the knowledge necessary to become a confident gas blender. As more divers learn the benefits of diving with enriched air and other gas mixes, only professional blenders will be able to provide a safe blend.
