

Getting Clear on the Basics:

The Fundamentals of Technical Diving

Jarrod Jablonski

Global Underwater Explorers

Contents

Acknowledgements	10
Preface	11
Chapter 1: Technical Diving : Past and Present	12
History	12
The Mysterious Malady	12
The Birth of SCUBA - Open, Closed and Semi-Closed Systems	13
The Birth of Technical Diving	14
What is Technical Diving?	15
The Fate of Technical Diving	15
How Can Divers Receive a Good Education?	16
Global Underwater Explorers: Why Another Agency?	18
Self-Assessment	18
Readiness for Advanced Diver Training	18
What Level of Experience Should One Achieve Before Taking a Technical Diving Course?	19
What Buoyancy Skills Should One Master Before Taking a Technical Diving Course?	19
How Important is Physical Fitness to the Technical Diver?	19
Are You Qualified?	20
Chapter 2: Introduction To Nitrox	21
Why Add Oxygen to Air?	21
What is Nitrox?	21
Nitrox History	21
Advantages to Breathing Nitrox	22
Complications of Using Nitrox	24
Looking into the Future	26
Chapter 3: Diving Physics Made Simple	27
Introduction	27
Basic Review of Gas Laws	27
Charles' Gas Law	27
Boyle's Law	28
Dalton's Law	28
Henry's Law	28
3.1.5 Oxygen Window Summary	29
3.2 Nitrox Parameters	30
3.2.1 The Big Three	30
3.2.2 How Deep Can One Go?	30
3.2.3 What Mix Should One Use?	31
3.2.4 What is the PO_2 ?	32

3.3 There's Got To Be an Easier Way: MOD Planners	32
3.3.2 How Does it Work?	35
3.4 More About Nitrox	35
3.4.1 The Concept of Equivalent Air Depth (EAD)	35
3.4.2 Calculated Advantage	36
3.4.3 The T Formula and EAD Chart	36
Chapter 4: The Logistics of Diving Mixtures Other Than Air	39
Operational Aspects	39
Nitrox Fill Techniques	39
Air Quality Concerns when Filling Nitrox	39
Special Preparations for Elevated Oxygen Concentrations	42
Oxygen Cleaning	42
Preparing Nitrox	43
Nitrox Availability Limited	45
All Fills Must Be Analyzed	45
Analyzing a Cylinder	45
Tank Labeling	45
Cylinder Marking: The Fine Points	46
Gas Switching Procedures	47
Chapter 5: Alternative Breathing Gasses	48
Background	48
Definitions and Application of Mixed Gasses	48
Principal Reasoning for Helium-based Diving Gasses	49
Misconceptions Associated With Helium Diving	49
The Reality of Mix Diving	49
Historical Overview of Trimix Diving	50
Nitrogen (N ₂)	51
Nitrogen Properties	51
Nitrogen Absorption, Diffusion and Other Considerations	51
Helium (He)	52
Helium Properties	52
Advantages of Helium	52
Disadvantages of Helium	52
Tissue Solubility	52
Thermal Loss	53
High Pressure Nervous Syndrome (HPNS)	53
Helium Gas Density	54
Helium Diving	54
Oxygen (O ₂)	55
Oxygen Properties	56
Special Oxygen Considerations	56
Carbon Dioxide (CO ₂)	56
Carbon Dioxide Properties	57
Other Breathing Gasses	58

Hydrogen (H ₂)	58
Hydrogen Properties	58
Special Hydrogen Considerations	58
Neon (Ne)	59
Neon Properties	59
Special Neon Considerations	59
Argon (Ar)	59
Argon Properties	60
Special Argon Considerations	60
Gas Narcosis	61
Chapter 6: Oxygen - The Most Mysterious Gas	63
Introduction	63
Common Oxygen Parameters	63
Oxygen: How Much is Enough?	63
What is Oxygen Toxicity?	64
Central Nervous System Oxygen Toxicity	65
Pulmonary or Whole Body Oxygen Toxicity	65
Symptoms of CNS Oxygen Toxicity	65
Off Effect	69
Why Do We Get Oxygen Toxicity? (Paul Bert Effect)	69
Chapter 7: Avoiding Oxygen Toxicity	72
Introduction	72
Toxicity Limits	72
The CNS Clock	74
Rethinking the Oxygen Clock	75
Pulmonary Toxicity (Lorraine Smith Effect)	76
Oxygen Toxicity Impact on Lung Function	76
Tracking Pulmonary Oxygen Toxicity	76
Review of Key Points Relevant to Whole Body Toxicity	81
Oxygen Recovery	84
Redefining the Limits of Oxygen Exposure and Oxygen Recovery	84
Chapter 8: Decompression Illness	86
Introduction	86
The Mysterious Malady	86
Hyperbaric Illness	87
Traditional Classification of Decompression Illness With Sub-Classifications	88
Reclassification of Decompression Illness	89
Barotrauma	90
Arterial Gas Embolism	91
Dissolved Gas DCI	91
Symptoms	91
Musculoskeletal Symptoms	91
Skin Symptoms	92

Isobaric Counterdiffusion	92
Lymphatic System	93
Heart	93
General Fatigue	93
Venous Gas Bubbles	93
Contributing Factors to Decompression Illness	94
Inexperience/Ignorance	94
Age	95
Linear Density	95
Smoking	95
Fitness	96
Exercise	97
Dehydration	97
Temperature	98
Physical Injury	98
Diving Profiles	98
Reverse Profile	99
PFO	100
Complement Activation and DCI	100
Chapter 9: Decompression Mechanics	101
Background	101
Introduction	101
Deep Stops	102
Deep Stop Details	102
Deep Stop Advantages	103
Decompression Profiles	104
What is Wrong With The Traditional Haldanean Decompression Model	105
Unconventional Decompressions	106
Chapter 10: Dive Planning	107
Introduction	107
Pre-Dive Preparation	107
Prior to the Trip	107
Arriving at the Dive Site	108
Prior to the Dive	108
Building a Dive Plan	108
Define Dive Objectives	108
Identify Risk	109
Diving Logistics	110
Establish Parameters	110
Time	111
Depth	111
Assign Responsibility	112
Contingency Planning	112
Evaluate Equipment	112
Nutritional Requirements	112

Dive Planning Components	112
Decompression Table Generation	112
Choosing the Right Gas Mixes: Standardized Mixtures	113
Oxygen Planning and Narcosis Levels	113
Establishing Breathing Gas Parameters	114
Nitrox Mixing Mathematics	114
Trimix Mixing Mathematics	115
Topping Off a Partial Trimix Fill With Air	116
Adjusting a Mix from a Remaining Mixture	117
Decompression Considerations	117
Cylinder Choices	118
Travel Mixes	118
Thermal Conductivity	118
Chapter 11: Managing Breathing Gas Supplies	121
Introduction	121
Measuring Gas Consumption	121
SAC Rate Calculations	121
The "One Third" Air Rule	123
Gas Management With Similar Tanks	123
Dissimilar Fill Pressures	124
Gas Management With Dissimilar Tanks	124
Limit the Team's Penetration to One Third of the Smallest Available Volume	124
Battlefield Example for Dissimilar Tanks Conversion - Imperial System	126
Metric Dissimilar Tanks Conversion Example	127
Chapter 12: Diving Procedures	128
Introduction	128
Accident Analysis	128
Relating Cave Fatalities To Technical Diving	130
Exceeding One's Level of Training	130
Going Beyond One's Personal Level of Comfort	131
Diving Beyond the Range of One's Gas Mixture	131
Using Improper or Insufficient Equipment	131
Stress on the Diver	131
Recognizing Stress	132
Coping with Stress	132
Panic	133
Team Diving	133
Cave Diving	133
Cold Water	134
Ice Diving	134
Wreck Diving	135
Diving From a Boat	135
Anchor Diving	135
Drift Diving With a Surface Marker	135
Drifting into a Fixed Point	136

Getting Back to the Boat	136
Inability to Return to the Up-line	137
Surface Support	137
Proper Diving Technique	138

Chapter 13: Emergency Procedures for Unconscious Divers 140

Introduction	140
Unconscious Diver At the Surface	140
Unconscious Diver At Depth	140
Reasons for Losing Consciousness	141
