- *Nitrox diving*
- *Dive computer emergencies*
- *Maintaining your dive computer*
- *Downloading your data*
- *Bonus - Making of featurette*

Choosing and Using Dive Computers is the DVD for anyone who is interested in purchasing a dive computer, or wants a better understanding of how to use the dive computer they already own. This fact filled and entertaining video explains the features of dive computers and how they work, with different models of computers shown under actual field conditions. The program takes you from the clear waters of the Caribbean to the cold waters off the coast of California, and inside the Catalina Hyperbaric Chamber where dive computers are tested.

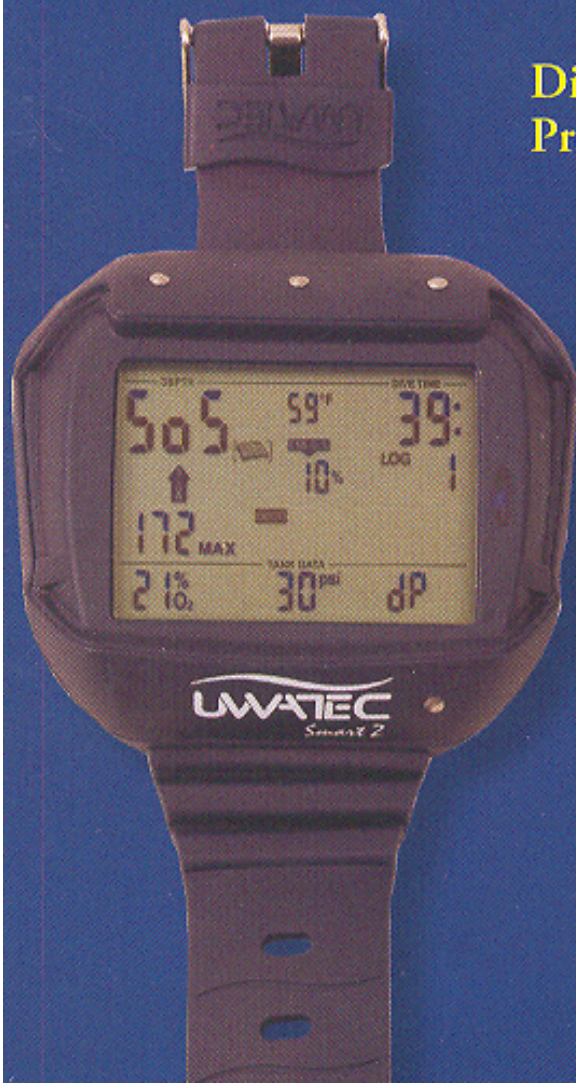

Choosing and Using Dive Computers starts with the premise that there is no single "best" dive computer for all divers, but there are at least one or two dive computers that will probably best suit your individual needs and the way that you dive.

One dollar from the sale of every DVD of this program is donated to the Catalina Hyperbaric Chamber.

Choosing and Using Dive Computers
Run Time: 43 minutes
Format: Standard Definition
Full-Screen Video
